The CF-1 provides high-volume output for almost any cushion or pillow. Its 12-second cycle time fills cushions as fast as an operator can handle them – up to four per minute for some types of cushions.

- No plastic liners needed due to utilization of hopper method.
- Eliminates "sit-down" noise and the return problems associated with plastic liners.
- Setup takes less than a minute with two simple adjustments – width and cylinder-stroke length.
- Simple operation allows operators to learn to use the machine in just a few minutes.
- Hopper control brackets maintain perfect alignment of the upper and lower hoppers at all times.
- Each cushion filler model will handle a variety of sizes in widths and lengths.
- Hopper cylinder offers extensions from 2" (3 cm) to 10" (25 cm), giving a full range of clearance openings from 4" (10 cm) to 20" (51 cm).
